

A powerful internet and eBusiness Occupational Health and Safety event management system

Ensuring that all workers on a site are provided with a safe, healthy working environment is the responsibility of management. Managing all the tasks associated with providing a safe, healthy work environment can be difficult and time consuming. Complying with corporate and regulatory reporting, ensuring that all incidents are reported and corrective actions closed out can consume vast amounts of time using paper based and spreadsheet systems.

InControl uses modern, leading edge technologies to streamline the entire safety and risk management process. The system provides a total, enterprise wide solution that is fully integrated, encompassing: cause analysis, risk rating and compliance, incident and injury reporting, lead and lag indicators, audits, inspections, suggestions and tools for managing all other types of events.

- ▶ Real-time data - no paper records or spreadsheets
- ▶ System is configurable to individual site requirements
- ▶ Upgrade available to include flight scheduling, rosters and accommodation, competency
- ▶ Real-time online reporting
- ▶ Compliance and timesheet modules
- ▶ Reliable high quality software with support

InControl is designed to record and report workgroup, divisional and corporate safety statistics. It allows entry of audit, hazard, incident, injury and investigation reports in addition to hours worked (exposure) to produce industry standard statistics. An important feature of InControl is the automated follow up and close out of outstanding actions arising from Audit, HAZOB and Investigation reports.

InControl is designed to assist with risk assessment and risk management in the safety environment. It utilises the risk management approach advocated in AS4804.

Powerful keyword analysis functions allow you to identify problem areas and then interrogate the data down to specific incident details.

Cause Analysis

Company Level:

Event Category:

Event Report Type:

Event Cause Type:

Status:

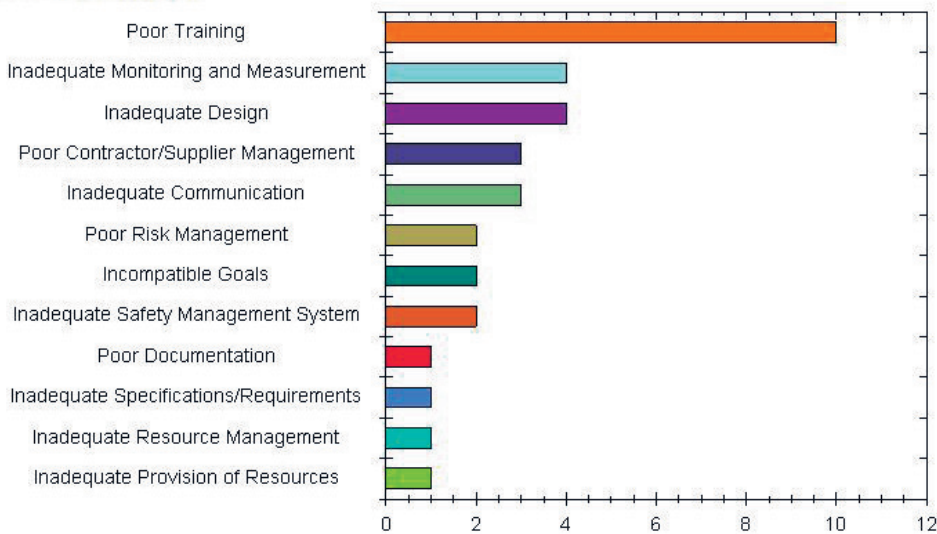

From Date:

To Date:

Chart Type:

The filter function allows you to report and analyse at different company levels, different event causes, event statuses and dates.

Organisational Factor Types

Name	Description
Incident:10	Sunken Pump
Incident:12	Punctured tyre
Incident:18	hit by a dozer in reverse
Incident:21	struck by passing vehicle

The Event Analysis function allows you to examine the cause of events in your organisation. The listed event items are interlinked and can be opened to provide more event specific details
